## Welcome to *FLO Components News*

### **New 18-VDC and 120-VAC PowerLubers**

*FLO Components* is now offering two new PowerLubers recently added to the popular Lincoln family of grease guns. The new 120-volt and 18-volt PowerLubers each offer power, durability and convenience.

The first of its kind in the industry, the 120-volt corded PowerLuber's motor provides the highest torque values in its class. Its variable-speed trigger combines with a two-speed transmission for precise flow control.

Ideal for filling grease reservoirs, the 120-volt grease gun is an excellent alternative to pneumatic lube tools. This corded grease gun eliminates the need for carrying around extra batteries or for compressed air supply.

Developed for heavy-duty applications, the 18-volt PowerLuber features a high-output motor and battery technologies that unite to provide outstanding run time. The grease gun delivers exceptional performance in high-pressure applications, and its two-speed transmission provides a high-volume grease flow option. Each model features a high-strength composite body and metal gear and pump housing for longevity. In addition, each tool has a balanced, ergonomic design to reduce operator fatigue and increase productivity.

## New I-Beam Clamp For Mounting LFR Reels

The new Lincoln Model 85654 I-Beam Mounting Kit is an alternative to drilling and welding when securing Lincoln Series 94000 Hose Reels to I-Beams. Designed to facilitate easy reel location, the kit reduces installation cost and time. The Model 85654 allows for perpendicular or parallel mounting to the beams and provides performance equal to that of direct fastening. The kit features a five-year warranty.

## Lincoln's New Approach to Reel Design

The Lincoln 94000 reel family offers many unique features including a "No hose lock-out" feature. Most reels in operation today suffer from a condition called "hose lock out". This is where the hose becomes fully extended by the operator and the reel locks at that point. The operator cannot move the hose forward or backward. A service call by a distributor is normally required at this point. With the Lincoln

LFR/94000 reels, the hose will not lock out. Due to its unique clamp in arrangement, the delivery hose is installed on the reel in such a manner that when fully extended the latching action is not allowed. This feature prevents the possibility of lock out and alleviates the need for quick access to the latch area.

## Impact Fitting Cleaner Kit - Model 5805

The Impact Fitting Cleaner is a time-saving alternative to fitting replacement and joint disassembly. Designed to eliminate downtime caused by dried blockages, the Impact Fitting Cleaner clears obstructions by allowing lightweight oil or solvents to enter the clog with a quick burst of pressure. It also cleans bearing and joint surfaces of hardened grease so that fresh grease can be applied.

The Impact Fitting Cleaner includes a steel drive cylinder, hardened piston and safety shield. In addition the kit comes with a high-pressure hose for hard-to-access fittings, spare drive seals and Lincoln's Model 5852 Coupler.

## About *FLO Components Ltd.*

For over thirty years, leading manufacturing companies in a wide range of industries have depended upon FLO Components' turnkey lubrication "Solutions" to reduce unscheduled downtime and improve productivity. In addition to customized systems, equipment & lubricants, FLO Components' "Solutions" include system design, scheduled on-site maintenance plans, personnel training lubrication

audits, in-house and on-site service and on-site installation.

For more information on FLO's systems or any of our Lincoln or other brand products offerings, please contact our Customer Service Department TOLL free at (800)668-5458, locally at (905)671-2355 or visit our web site at [www.flocomponents.com](http://www.flocomponents.com).
