Welcome to *FLO Components* News

QuickLub® Lubrication Systems and FLO Components Cost Effective Lube Solutions

Quicklub® systems are designed to provide a relative simple and cost -effective method of centralizing and/or automating the lubrication of your critical machine bearings.

Ask yourself – have we had unscheduled downtime due to bearing failures? Quickly estimate what were your lost production costs? How much maintenance personnel over-time was paid to get back into production? Have we had lost time related to personnel being injured performing manual lubrication tasks?

If your total is over \$2,500.00, please read on.....

Do you know how simple and inexpensive lubrication systems can be?

Are your lube technicians reaching into machinery to find key lube points? Is this a safety issue or does it requires scheduling downtime / overtime to get the job done?

Look for **FLO** to help reduce your costs. Our Quicklub® system is an inexpensive centralized system dispensing your lubricant manually from a lever gun.

The Quicklub® centralized lubrication system will dispense metered amount of lubricants to each point covered by the system. Even those hard to reach are assured of being properly lubricated and purged of contaminants.

FLO provides Custom Kits to cover virtually any quantity of points desired or pre-assembled kits to service up to 12 points from a single grease fitting.

It can't be simpler!!!

Quicklub® Fully Automatic System

Want your maintenance personnel to be more pro-active versus reactive? Quicklub® systems can be fully automated using one of a wide range of 12VDC, 24VDC or 120VAC electric or pneumatic pumps. Obtain the advantages of dispensing small measured amounts of lubricants at frequent intervals while your machinery continues to produce plus free up your maintenance personnel for truly "preventative" activities.

Quicklub® Systems are the right solution for many industries and applications by eliminating costly manual point-by-point lubrication.

QLS 301 Systems – Pump and Metering Valves in a Package

Think the cost of reducing downtime and improving safety using a lubrication system is out of reach? Read on!!

The QLS 301 integrated pump/metering valve system was designed to be a cost-effective solution for applications with eighteen lubrication points or less. As installation requires mounting a single unit with one electrical connection, affordable automatic lubrication is now available for your smaller equipment.

It is compact, rugged, easy to install and easy to use. It has a long list of standard features include a built-in controller with LED display and keypad for easy programming, system cycle monitoring, built-in low level reservoir control and remote control capability.

Finally, it can handle your in-shop grease up to the industry standard NLGI 2 rating.

A Simple Lube Solution!!! And cost effective!!!

Don't have the time to install - **FLO** factory-trained installers are available to install at your facility on your schedule.

The Next Step?
