FLO Components Ltd. Offers New Lubricator Pump

FLO Components is now offering the new HTL 429 Lubricator Pump for hydraulic tools. Designed to deliver precise lubrication each time a hammer or other hydraulically driven tool cycles, the pump is ideal for construction OEMs, hydraulic hammer retrofits, demolition attachments and medium to large breakers/hammers. The pump is manufactured by Lincoln of St. Louis, a world leader in the manufacture and sale of lubrication and pumping equipment for use in vehicle service and industry.

The unique HTL 429 Pump protects your Critical Breakers / Hammers with precise, consistent lubrication, allowing your operator to lubricate the hammer without leaving the cab. The pump attaches directly to the hammer, gripper or crusher and is connected to the hydraulic power supplier of the carrier. When the operator pushes the pedal to activate the hammer the hammer grease pump is activated, automatically sending a single shot of grease to lubricate the bearing points. When the operator’s foot comes off the pedal and hydraulic fluid pressure is removed from the hammer, the drop in pressure releases the spring in the pump and recharges it so it is ready to lubricate again the next time the device is activated. This fully automatic system reduces machine repairs and replacement costs, and no work interruption means increased productivity. Installed directly on the hammer, the pump travels with your hammer, not your machine, making it perfect for rental equipment or hammers used on multiple machines. The HTL 429 is easy to use and maintain. It has a visual low-level indicator and utilizes standard 14.5-ounce grease cartridges for convenient refilling. An attached grease fitting allows for manual filling and fast priming of the pump. Optional metering plugs offer four basic delivery rates per stroke of the lubricator. The ability to pump either chisel paste or standard grease and to adjust the delivery rate allows you to utilize the HTL 429 pump on several sizes and types of hydraulically driven tools. Artic Breeze Truck AC Dealer Base Continues To Grow

Industry interest in Arctic BREEZE Truck AC systems continues to grow as new partners continue to be added to the list of official dealers for the innovative technology on a weekly basis, says Hammond Air Conditioning Vice President Deb Lemon. Arctic BREEZE dealers can now be found coast-to-coast and the brand’s popularity continues to grow.

“As more and more levels of government enact strict no-idling regulations and the price of fuel remains uncertain, truck fleet owners and independent operators throughout North America are coming to recognize the value of our battery-powered 12V DC truck air-conditioning system over traditional diesel-powered APU-driven systems,” says Lemon. “Growing requests from leading industry dealers like CSTK to represent the Arctic BREEZE line are indicative of this trend.”

Recent additions to the Arctic BREEZE roster include 49er Truck Stop and Cascade Sierra Solution located in Sacramento; Espar of Michigan; Campbell-Brown Inc. located in North and South Carolina; Big Rig of Fort Worth, Texas and Gretna, Nebraska; and Boomer Diesel Engine & Generator in Oklahoma City, OK. All of these dealers are specialists in AC systems and their endorsement of the Arctic BREEZE system reflects their ongoing quest to find the right product for their customers, while at the same time demonstrating their environmental responsibility.

Hammond Air Conditioning Territory Manager, Mark Warnes, says that a general greater interest in battery-powered truck air conditioning systems and the product’s simplicity of design account for the rapid growth in the number of new Arctic BREEZE dealers in recent months.

“Things are moving quite rapidly for us right now,” says Warnes. “As more and more fleet owners learn about the product through word-of-mouth, more and more dealers are approaching us to represent the brand. At present, I’m talking to prospective dealers from coast to coast. These are exciting times for Hammond Air Conditioning Ltd.”

Since 2004, the US EPA has recognized environmentally “smart” transportation technologies with the SmartWaySM service mark. “Hammond Air Conditioning is proud to be an accredited SmartWay partner, doing our part to reduce transportation-related emissions with Arctic BREEZE Truck AC,” says Lemon. “As a SmartWay-recognized “no-idle” solution, all purchases of Arctic BREEZE Truck AC are exempted from US Federal Excise Tax.”

INCREASE ROI ON YOUR MOBILE EQUIPMENT

AUTOMATIC LUBE SYSTEMS

√ Reduce Unplanned Downtime
